## Frequently Asked Questions (1/2)

#### **About Visits**

### 1) How do I schedule a Telehealth session?

Existing patients can contact their provider to initiate a request for a Telehealth visit. New patients can call in to initiate, and you or a member of your staff will need to add them to the system as a patient before scheduling a Telehealth visit. Once the visit is scheduled, you or a member of your staff can send an invitation to the client. To send this invitation, navigate within MedBridge to the Patient Engagement module and select Home Exercise Program. While within the Home Exercise Program module, select the patient with whom you will be having the Telehealth session and click Send Intro Email.

### 2) How do I add a new patient for a Telehealth session?

Telehealth functionality has been integrated to ensure limited changes to your current workflows. New Telehealth patients must be added through the Home Exercise Program module within your MedBridge account. Once patients are added, you will see options within their profile to send a Telehealth Intro Email and Start the Virtual Visit.

### 3) How do I start a Telehealth session?

Start a Telehealth session by navigating to the patient's profile through the Patient Engagement module, selecting Home Exercise Program, and then selecting the patient you will be seeing. Click *Start Video Call* and check off either "Send Email Invite" or "Send Text Message Invite," then check "I confirm that my patient consents to receiving this message" and click Send Invite. Your Telehealth session will then begin.

### 4) Where can I locate a patient's access code? Is it possible to resend it?

Your patient needs their access code in order to join the Telehealth session. You can resend the Telehealth intro email to the patient. This email includes the patient's access code.

### 5) How do I create and assign an HEP for my patient?

You can assign your patient an HEP either prior to their Telehealth session or during the session. If you are assigning the program during the session, select the Telehealth session window and then click the Play button. This will bring up the HEP tray. Click Create Exercise Program and a new window will open in which you can build your patient's exercise program. When you are done, click Save and return to the Telehealth session. To see the newly added exercises within the session, click on Refresh within the HEP tray.

### 6) How do I update my patient's HEP?

To update your patient's HEP during the Telehealth session, select the Telehealth session window to see your available options. Click on the Play button, and your patient's HEP tray will slide up from the bottom. Click on Update Exercise Program and a new window will open in which you can see the HEP builder. Update the HEP as usual and click Save. To see the newly modified exercise program within the Telehealth session, return to the session and click Refresh within the HEP tray.

### 7) If a patient is traveling and they want to be treated from their home state where their provider is licensed, can they still receive treatment via a Telehealth appointment?

The provider needs to be licensed in the state in which the patient resides. Different states have different laws around vacation treatment.

There is a new type of PT license called 'PT compact' that allows a PT to quickly get licensed in the 18 states included in the compact.

### Frequently Asked Questions (2/2)

### About Visits (cont.)

## 8) Is the virtual visit information with the client shared and stored under HIPAA?

All data from the Telehealth session is shared and stored in compliance with HIPAA/Hi-Trust regulations and suggestions. (*link*)

### 9) Is patient messaging available?

Messaging is not currently available through the Telehealth experience.

### 10) How do I update a patient's details?

To update a patient's details, please navigate to the patient's profile within the Patient Engagement module in MedBridge. Select the patient from your list of Home Exercise Programs, then click Edit Details. From the Edit Details page, you can update their name, birthdate, phone number, and email.

## 11) Can I assign patient education prior to or during the visit?

Before the Telehealth session begins, you can assign patient education as you usually would through the MedBridge platform.

To update your patient's education during the Telehealth session, select the Telehealth session screen to see your options. Click on the Play button and your patient's HEP tray will slide up from the bottom. Click on Update Exercise Program and a new window will open with the HEP builder. From here, click the Patient Education tab. Update the Patient Education as usual and click Save. When the patient leaves the Telehealth session, they can find their newly added patient education under Resources.

### 12) How do I get reimbursed for a Telehealth visit?

While you cannot bill for treatment codes at this time, due to recent changes as a result of COVID-19 you can now bill for an "e-visit," which can include communication, evaluation, assessment, or education. You can bill for one of the following codes according to the duration of the visit:

**G2061:** Qualified non-physician healthcare professional online assessment and management, for an established patient, for up to seven days, cumulative time during the seven days; 5–10 minutes

**G2062:** Qualified non-physician healthcare professional online assessment and management service, for an established patient, for up to seven days, cumulative time during the seven days; 11–20 minutes

**G2063:** Qualified non-physician qualified healthcare professional assessment and management service, for an established patient, for up to seven days, cumulative time during the seven days; 21 or more minutes.

## Troubleshooting

### **Telehealth Troubleshooting**

### 1) I am unable to send a video call invite to my patient via text:

Check to make sure that there are no spaces in the patient's phone number.

Send Text Message Invite Phone number (425) 736-5041	Send Text Message Invite Phone number (425)/736-5041
I confirm that my patient consents to receiving this message.	I confirm that my patient consents to receiving this message.
SEND INVITE	SEND INVITE

### 2) What happens if I get disconnected from the call with my patient?

If you get disconnected during your call, you can rejoin your virtual visit by clicking "Rejoin Video Call" from your patient's profile. If this happens, your patient will be notified that you have been disconnected. However, if your patient gets disconnected, you will need to start a new virtual visit.

## Troubleshooting

#### **Technical Troubleshooting**

### 1) How do I test my internet connection speed?

To make sure that your laptop or desktop computer has a reliable internet connection you will need to conduct an internet speed test. It is recommended that you have an internet speed of at least 25mb/second to conduct a telehealth visit.

#### To conduct a speed test:

- 1. Navigate to google.com.
- 2. Type in "speed test" and press search.
- 3. An internet speed test will appear at the top of the search results. Click the blue "Run Speed Test" button to complete the test. A dialogue box will appear on your screen.

4. Your download speed should be above 25mbps for an optimal Telehealth experience.

### Technical Troubleshooting (cont.)

### 2) How do I ensure audio and video are enabled on my device?

If you are having trouble getting your camera or microphone to connect to the telehealth call, first make sure that they are enabled on your computer.

#### i. Camera/Mic Enablement: Mac

To enable the camera and microphone on your Mac:

1. Click the **Apple logo** in the top left of your screen and click on **System Preferences**.

#### 2. Select Security & Privacy.

### i. Camera/Mic Enablement: Mac (cont.)

- 3. Select the **Privacy** tab.
- 4. Select Camera.
- 5. Ensure your browser (Firefox or Chrome) has a checkmark next to it so that it can access the camera.

- 6. Select Microphone.
- 7. Ensure your browser (Firefox or Chrome) has a checkmark next to it so that it can access the microphone.

Accessibility					

- 8. Close the Security & Privacy box.
- 9. Recheck your Telehealth connection to see if your camera and microphone work.
  - a. If you're still not able to connect, restart your computer and try again.
  - b. If issues persist, contact MedBridge support at support@medbridgeed.com or 206-216-5003.

### ii. Camera/Mic Enablement: PC

To enable the camera and microphone on your Windows 10 PC:

1. Click the start button and select the gear icon to access the Settings menu.

2. Select Privacy in the lower left corner.

- 3. Under App permissions, select Camera.
- 4. Make sure the switch under Allow apps to access your camera is toggled to On.

### ii. Camera/Mic Enablement: PC (cont.)

5. Scroll down to the section that says Allow desktop apps to access your camera. Make sure this is also toggled to On.

### ii. Camera/Mic Enablement: Mozilla Firefox

1. Open Firefox and select the Firefox menu, represented by three horizontal lines in the top-right corner.

	* Preferences	× +	
(←) → C'	ŵ		\$ II\ © ®' ≡

2. Select Preferences.

#### 3. Select Privacy and Security.

### ii. Camera/Mic Enablement: Mozilla Firefox (cont.)

- 4. Scroll down to Permissions.
  - a. To enable your camera, select **Camera**. Confirm that the camera setting for https://www.medbridgeeducation.com is set to **Allow**.

b. To enable your microphone, select **Microphone**. Confirm that the microphone setting for https://www.medbridgeeducation.com is set to **Allow**.

### 4) How do I confirm if my internet browser is up to date?

#### i. Confirm Version: Google Chrome

1. Open Chrome and select the Chrome menu, represented by three vertical dots in the top-right corner. If your browser is not up to date you will see an "arrow" where the "dots" should be.

•••	Net	ew Tab × +			
$\leftarrow \rightarrow$	C	G Search Google or type a URL	\$ ••••]	K	:

2. From the drop-down menu that appears, select Help, then select About Google Chrome.

3. The window that appears will automatically check for updates and show you the current version of Chrome. If an update is available, Chrome will be updated automatically. After Chrome is updated, click the **RELAUNCH** option to restart Chrome and complete the update.
